

Feedback on MD/PhD course in Medical Statistics, Spring 2001

This course is still evolving and your views would be of great help to me when considering developments and modifications for next year. It would be helpful if you could return comments to me by either internal or external post (to Professor JNS Matthews, Department of Statistics, University of Newcastle, Newcastle upon Tyne, NE1 7RU), rather than electronically.

The following headings are suggested but feel free to comment about any aspect of the course.

1. **Course content** - were there things that were covered unnecessarily and were some things you wanted to hear about omitted?

2. **Accessibility of material** - was the level too low, too high or about right?

3. **Balance of course** - lectures versus practicals

4. **Timing of course** (interpret this broadly - was two sessions a week about right, could the lectures have been in a better place or at a better time of day?)

5. **Other comments**
