- These is not really a presentation. Slides are just to keep me on track...
- A demo of Chirun, building on the idea of a repository based approach described by Colin last week

Intro

- These is not really a presentation. Slides are just to keep me on track...
- A demo of Chirun, building on the idea of a repository based approach described by Colin last week
- Caveat: Chirun is undergoing quite significant changes and will be different (better) in the coming months.

About Chirun

- Brief, as most of you have heard me go on about it lots before!

About Chirun

- Brief, as most of you have heard me go on about it lots before!
- Input: LaTeX or Markdown
- Output: responsive web based output + PDF

About Chirun

- Brief, as most of you have heard me go on about it lots before!
- Input: LaTeX or Markdown
- Output: responsive web based output + PDF
- Key feature is the External Tool - integration with Canvas

Motivation

- Motivation was
 - Initially: support AL
 - Now: Meet accessibility requirements (+SSPs); do things better!

(This is a Chirun-built presentation)

Examples

- SES2003 (stats!)

Examples

- SES2003 (stats!)
- Python notes (enriching)

Examples

- SES2003 (stats!)
- Python notes (enriching)
- Transition material (just because)

Examples

- SES2003 (stats!)
- Python notes (enriching)
- Transition material (just because)
- ASK website (theme independent from content)

Canvas Integration

Two ways:

- Standalone item: upload to external tool
- Pre-built item: build a whole course and link to it, or to a single page

Pre-built flow

- Edit/build on local device
- Commit changes to Git
- Continuous integration: builds and pushes material out
- Connect through the external tool

Q & A
